Our client **SBC Labs** got a **production-ready data platform.**

In months, not years.

Without hiring a technical team.

They did it by handing the data engineering to our **AI Data Engineer.**

Here is their story, in 6 parts:

BigHammer.ai

@bighammerai

Context: When SBC Labs came to us, they had a big goal and a hard problem.

They wanted a first-of-its-kind **Customer Readiness Score** for rural India: who is ready for savings, credit, investment and insurance.

But hundreds of millions of people there have **no transaction data.**

And their team are behavioural scientists and designers, not data engineers.

@bighammerai

1. The plan said “multi-year”

The score had to come from many sources. Surveys. Programmable data. Product usage. Phone and internet signals.

Every one in a different shape.

Joining data like that is usually **years of data engineering.**

BigHammer.ai

@bighammerai

2. They skipped hiring a data team

The usual next step is to hire data engineers. That costs time and money before a single score exists.

So SBC Labs handed the engineering to our AI Data Engineer instead.

Their team stayed on the science.

@bighammerai

3. Every source came in

Our AI Data Engineer brought in each source.

It cataloged every dataset with its business context, so the data says what it means.

No technical team needed on their side.

@bighammerai

4. Many signals became one score

Using NLP, it checked the sources against each other and modelled them into **one Customer Readiness Score.**

SBC Labs brought the behavioural science.

We did the engineering.

5. Production-ready in months

What was headed for a multi-year build became a **production-ready platform in months.**

Today, BigHammer powers the SBC Labs data platform.

6. Banks can now see who is ready

Banks, FinTechs and microfinance institutions can find people who are **ready for financial products but underserved today.**

Including women in rural India.

Next, SBC Labs is exploring scores for agriculture insurance, auto financing, farm equipment leasing and healthcare access.

SUSTAINABLE BEHAVIOUR CHANGE

"BigHammer transformed a multi-year data engineering challenge into a production-ready platform **in months**, without requiring a technical team."

@bighammerai

Is there a data project in your team that everyone calls **“multi-year”?**

I would be glad to show you what it would take with our AI Data Engineer.
