What actually happens on a 30-minute call with us.

People tell me they'd like to talk about their Databricks bill, but aren't sure what they're signing up for.

Fair enough. Here's the whole half hour.

Richard Lawrence

BigHammer.ai

MINUTES 0 TO 5

1. Your context

- Your platform, and roughly what you spend on Databricks
- Your renewal or commit date
- The one question you need answered

That's it.

Richard Lawrence

BigHammer.ai

MINUTES 5 TO 20

2. Your numbers, not ours

Run the offline assessment first, and **we walk through your report together.**

Haven't run it? **We look at what your system tables can tell you** and run the first checks live.

Either way, it's your workloads on screen. Not a generic demo.

Richard Lawrence

BigHammer.ai

MINUTES 20 TO 30

3. What you leave with

- The three cost drivers in your Databricks bill worth looking at first
- Which of your numbers are measured, and which would be estimates
- An honest view of whether a full assessment is worth your time

Sometimes it isn't, and we'll tell you.

Richard Lawrence

BigHammer.ai

4. What isn't on the call

A pitch deck.

If BigHammer.ai can help cut your Databricks bill, you'll see how, on your own numbers.

If it can't, you still leave with **a clearer picture of your spend** than you had at the start.

Richard Lawrence

BigHammer.ai

5. Want to skip the small talk?

Bring the names of your three most expensive Databricks jobs.

We'll place each one live: keep, migrate, optimise then evaluate, evaluate, or defer. And tell you why, in plain terms.

You keep the answer either way.

Richard Lawrence

BigHammer.ai

Book 30 minutes on cutting your Databricks bill.

Your numbers, where the savings are, and an honest answer on whether it's worth going further.
